HEADS

HEADS UP

Heads Up, opportunity is on the horizon in the aviation industry.

Whether you want to fly, chart the course, see the world, keep aircraft moving, or guide people home, we need you. Find your calling and start making a plan.

We're ready for you to join us.

You can access resources, tools, and experiences by visiting AviationWorks4U.org or by emailing info@aviationworks4u.org.

PILOT

This is not your average 9-to-5 job – this is a life-changing career. Commercial pilots fly and navigate aircraft for airlines, transporting people and cargo safely and securely to destinations around the world.

The three most common paths to becoming a professional airline pilot are aviation university, flight training academy, or the military.

A good starting point in your journey to becoming a pilot is to pursue your Student Pilot Certificate.

Learn more about next steps and join us in the sky by visiting AviationWorks4U.org.

I CAN FLY

AIRCRAFT DISPATCHER

I CAN
CHART THE
COURSE

We need people to chart the course for aircraft, and you could be the right person for the job. Dispatchers play a vital role in the aviation industry, sharing responsibility for flights with the pilot in command. They assist with pre-flight planning, maintenance problems, and navigation.

To become a dispatcher, you will need to complete specific course work and pass the Federal Aviation Administration Aircraft Dispatcher Computerized Knowledge Test.

We can help you identify resources and next steps as you plot your career path. Learn more at AviationWorks4U.org.

AIR TRAFFIC CONTROL SPECIALIST

Are you ready to guide people home? Air traffic control specialists ensure the safe movement of more than 134 million operations each year, including nearly nine million commercial flights.

Air traffic control specialists are well paid, and plenty of job openings are on the horizon.

After gaining the necessary education or work requirements, the Federal Aviation Administration will need to hire you, then you will receive classroom training and on-the-job training. Visit AviationWorks4U.org to learn more about your journey to the control tower.

I CAN
GUIDE
YOU HOME

FLIGHT ATTENDANT

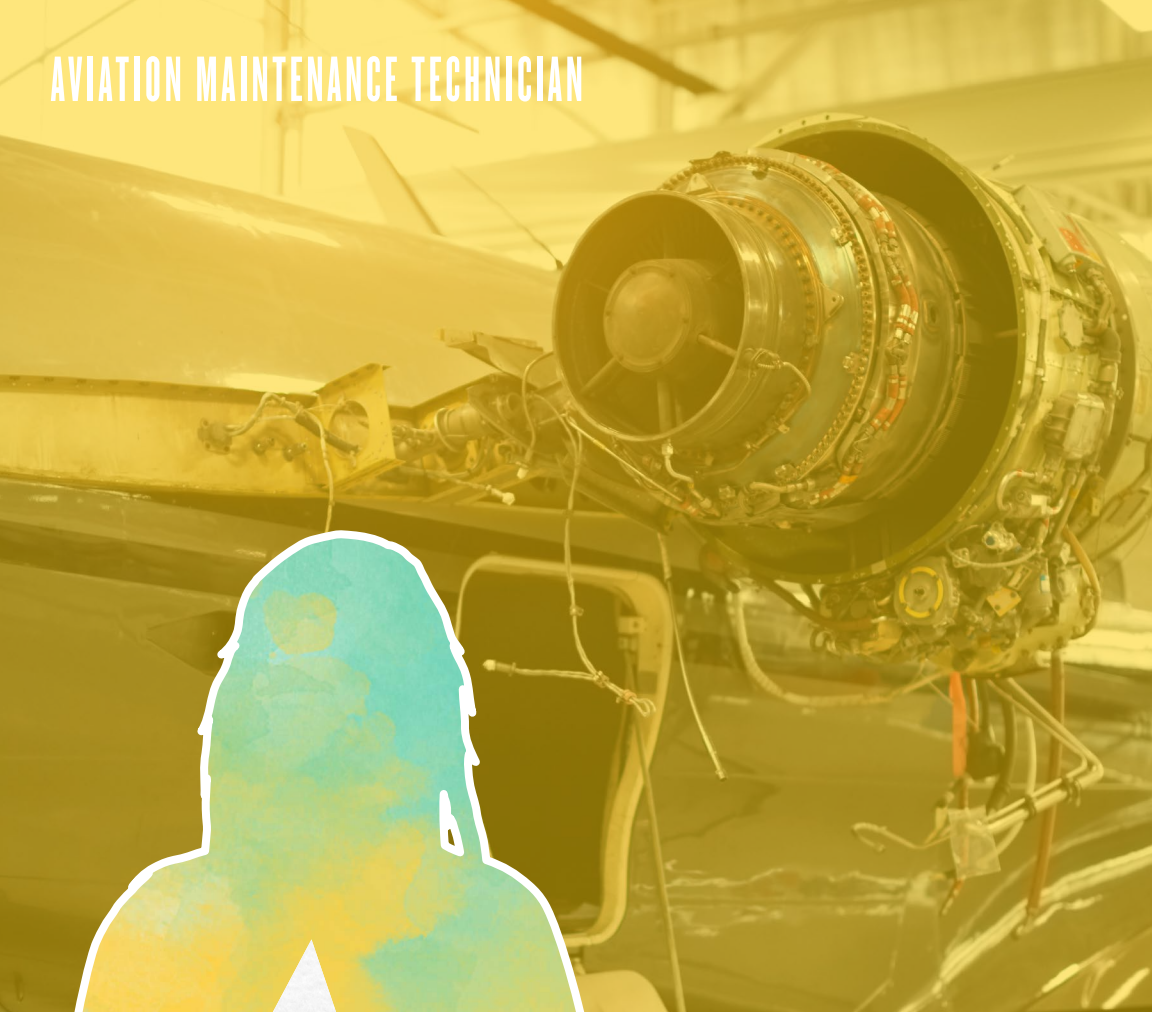

I CAN
SEE THE
WORLD

It's time to see the world. Flight attendants play a vital role as aviation's first responders in the airplane cabin. Their responsibilities include coordinating emergency medical care, protecting the flight deck, and helping passengers who require assistance.

Airlines hire flight attendants, then provide them with training. Also, flight attendants must be certified by the Federal Aviation Administration.

Currently, there are 100,000 flight attendants in the United States, but we need more well-trained team members to join us. Develop a plan for your future at AviationWorks4U.org.

AVIATION MAINTENANCE TECHNICIAN

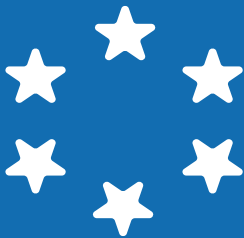

Keep the world moving by becoming an aviation maintenance technician. Technicians repair, test, and troubleshoot aircraft to ensure they are ready to take flight, and they make a good living while doing it.

Technicians need to complete high school and pursue a technical training program after graduation. You can also gain employable experience through the military and other related careers.

We need new technicians as soon as possible. Identify your next steps and start taking action today by visiting AviationWorks4U.org.

KEEP
MOVING
